E_d : Producción de electricidad media diaria por el sistema dado (kWh)

E_m : Producción de electricidad media mensual por el sistema dado (kWh)

H_d : Media diaria de la irradiancia global recibida por metro cuadrado por los módulos del sistema dado (kWh/m²)

H_m : Suma media de la irradiancia global por metro cuadrado recibida por los módulos del sistema dado (kWh/m²)

PVGIS

The screenshot displays the PVGIS web application interface. At the top, the browser address bar shows the URL `re.jrc.ec.europa.eu/pvgis/apps4/pvest.php#`. The page header includes the logos for the European Commission (JRC) and CM SAF, along with the title "Photovoltaic Geographical Information System - Interactive". A navigation menu below the header lists "EUROPA > EC > JRC > DIR-C > RE > SOLAREC > PVGIS > Interactive maps > europe".

The main interface is divided into several sections:

- Search and Positioning:** Includes a search box with the example text "e.g., 'Ispra, Italy' or '45.256N, 16.9589E'", a "Search" button, and fields for "Latitude:" and "Longitude:". A "Go to lat/lon" button is also present. The cursor position is shown as "57.240, 31.600".
- Map:** A map of Europe is displayed with "Mapa" and "Satélite" view options. The map shows various countries and cities, with a red dot indicating the selected location.
- Configuration Options:** A sidebar on the right contains several sections:
 - NEW: PVGIS** (highlighted in blue)
 - PV Estimation:** Includes a "Daily radiation" section and a "Stand-alone PV" section.
 - Connected PV:** Includes a "What is this?" link, a "Module" dropdown menu (set to "Monocrystalline silicon"), a "Power" input field (set to "1" kWp), and a "System losses [0;100]" input field (set to "14" %).
 - Mounting options:** Includes a "Mounting position" dropdown menu (set to "Free-standing") and a "Slope [0;90]" input field (set to "35" degrees). There are checkboxes for "Optimize slope" and "Also optimize azimuth".
 - Tracking options:** Includes checkboxes for "Vertical axis", "Inclined axis", and "2-axis tracking", each with a "Slope [0;90]" input field (set to "0" degrees) and an "Optimize" checkbox.
 - Horizon file:** Includes a "Seleccionar archivo" button and the text "Ningún archivo seleccionado".
 - Output options:** Includes checkboxes for "Show graphs", "Show horizon", "Web page" (selected), "Text file", and "PDF".
- Footer:** Includes a "Calculate" button, a "[help]" link, and a "Google" logo.

Modelos estadísticos basados en datos históricos

KEY ISSUES

Claves del diseño

- Prever la demanda de forma precisa
- Buenos paneles fotovoltaicos
- Muy buen variador
- Bomba con motor adecuado
- Monitorización
- Nos olvidamos de las baterías
- Ser generosos en el dimensionado

Gestión del bombeo solar en red

The image displays a software interface for managing a solar pump network. The main component is a satellite map of an agricultural area, divided into 20 sectors (sector 3 to sector 20). Each sector is outlined in yellow and contains a red circular icon representing a solar pump. A central blue icon with a white 'A' and a red '+' sign is positioned in the middle of the map. The interface includes a left sidebar with a 'Capas' (Layers) section and an 'ORC+' section. The 'ORC+' section is currently active and shows a 'Programación' (Scheduling) tab. Under 'Programación', there is a 'Manual' mode selector, a 'Sector' dropdown menu, and a weekly scheduling grid with days L, M, X, J, V, S, D. Below the grid are two toggle switches for 'Fertiriego' (Fertigation) and 'Riego crítico' (Critical irrigation), both currently set to 'OFF'. At the bottom of the 'Programación' section are two input fields: 'Riego (min)' set to 240 and 'Fertiriego (min)' set to 0. A 'Guardar' (Save) button is located at the bottom right of the 'Programación' section. The 'Configuración' (Configuration) section is visible at the bottom of the sidebar but is currently inactive. On the right side of the map, there is a 'Servicios' (Services) panel with two radio button options: 'OSIRIS' and 'ORC+', with 'ORC+' selected. The map background shows a river and some text labels like 'SEGURA Y DEL MUNDO' and 'LIC SIERRAS DE ALCARAZ Y DE SEGURA Y CANONES DEL SEGURA Y DEL MUNDO'.

Gestión del bombeo solar en red

The screenshot displays a web-based interface for managing a solar pump network. The main view is an aerial map of an agricultural field with a solar pump and several irrigation zones. The pump is represented by a blue icon with a green plus sign. The irrigation zones are outlined in yellow and labeled with their respective irrigation and fertigation durations:

- Top zone: Riego: 420 min Ferti: 1 min
- Middle zone: Riego: 420 min Ferti: 1 min
- Bottom-left zone: Riego: 300 min Ferti: 1 min
- Bottom-right zone: Riego: 200 min

The left sidebar contains the configuration panel:

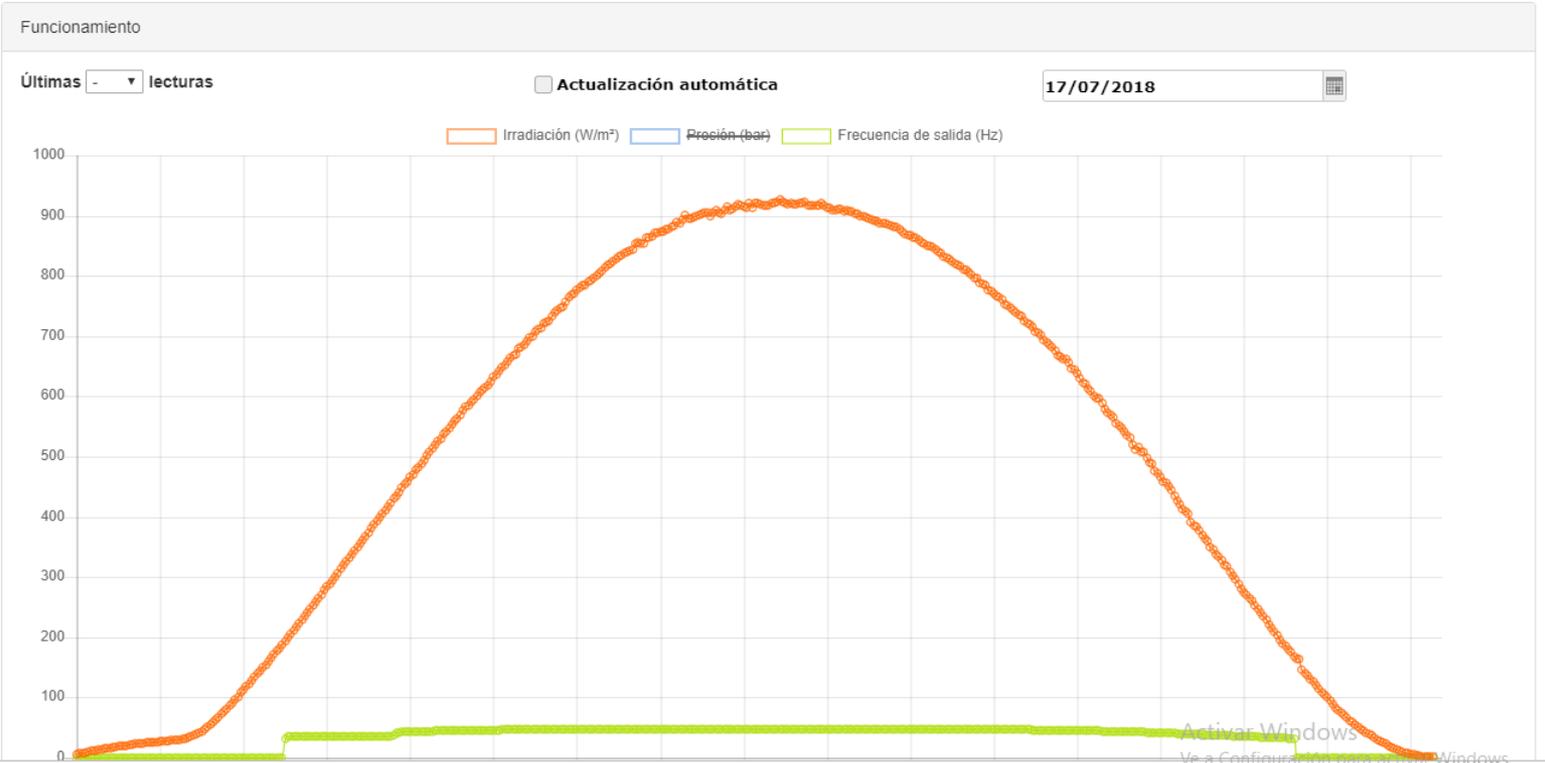

- Capas** (Layers)
- ORC+** (Active service)
- Programación** (Scheduling):
 - Mode: Automático
 - Día actual del ciclo: 1
 - Sector: sector II
 - Week: L M X J V S D
 - Fertiriego: OFF
 - Riego crítico: OFF
 - Riego (min): 420
 - Fertiriego (min): 15
 - Buttons: [Refresh] [Check] [Save]
- Configuración** (Configuration)

The right sidebar shows service options:

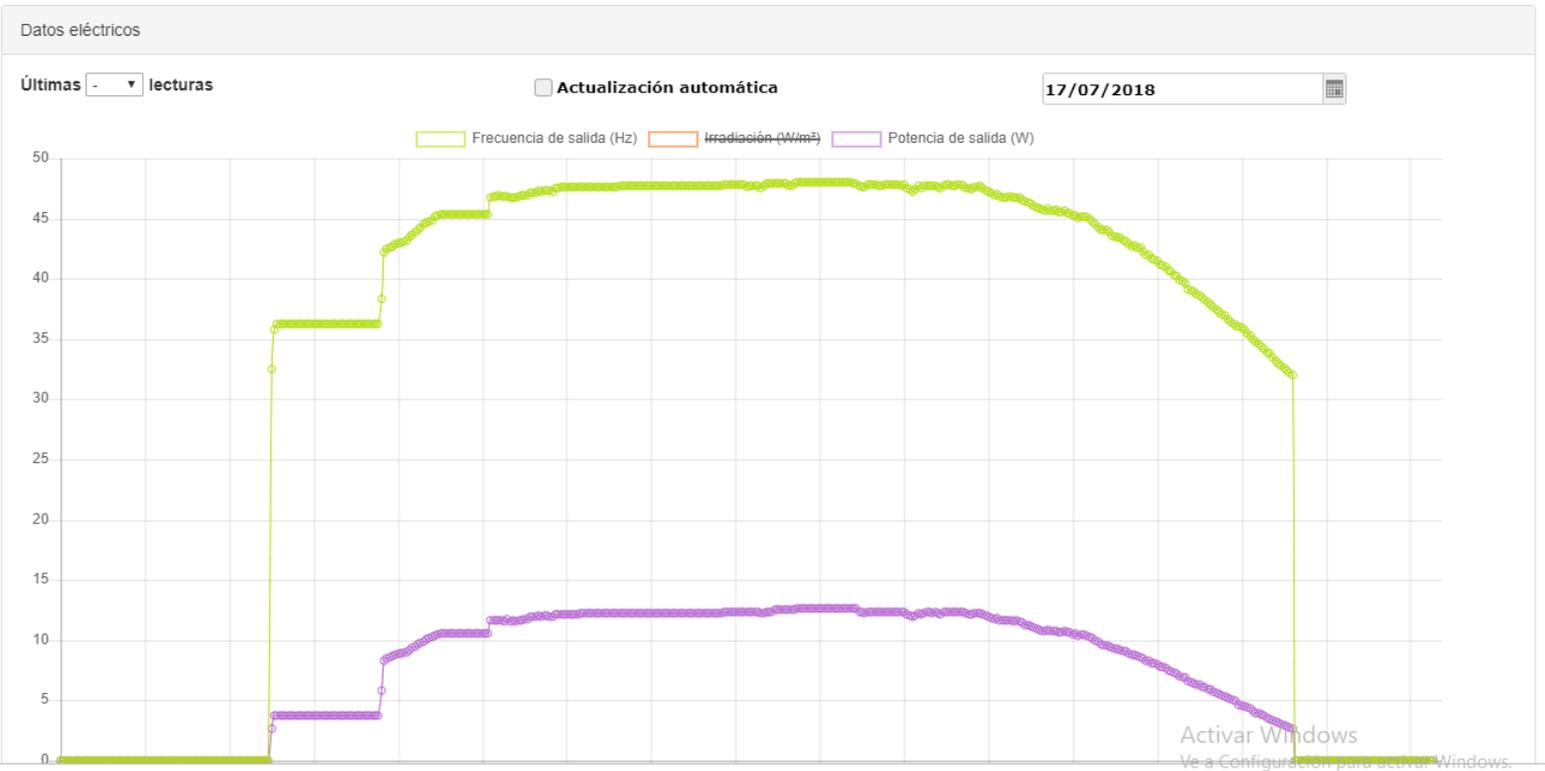

- Servicios** (Services):
 - OSIRIS (Inactive)
 - ORC+ (Active)

The map also shows a road labeled "CAMINO SIN NOMBRE" and a river.
